UNIVERSITY OF KENTUCKY - PLEASE VERIFY PARENTAGE OF HORSE

The purpose of DNA testing is to verify parentage and establish a genetic "fingerprint" for individual horses. The DNA information will become part of the GCDHA owned databank, which is maintained by the University of Kentucky. The GCDHA has authorized the University to allow cross referencing of the GCDHA databank to establish or dismiss parentage claims. Registration certificates will not be processed until the DNA analysis is complete and a copy of the report has been received by the GCDHA office.

I hereby certify the DNA sample submitted is from the horse named above.

Hair from the mane or tail must be freshly pulled so the root bulb remains attached to the hair shaft. The root bulb contains the DNA not the shaft. At least 35 root bulbs are required. Trim the hair shaft to about 3 inches in length. Place hairs in plastic bag and tape or staple bag to bottom of form and mail ASAP.
